

Service Provider - Filter Focus

To Whom It May Concern:

Herewith I would like the opportunity to thank Filter Focus on their outstanding performance & assisting FluidLink in Wear Control & Oil Cleanliness on all major hydraulic systems on Hulamin PMB.

We have had some great results in removing water out of hydraulic systems by using Filter Focus – Dehydrator which proofed to be cost affective & deliver great results, i.e.

A Hydraulic tank had 34% water contamination in the oil (Engen TQH 20/46) due to a cooler system that failed. We brought 34% water down to < 0.0% within 3 days by using the Filter Focus – Dehydrator. The turnaround time & service from Filter Focus staff was quick, precise & friendly.

Keeping oil as clean as possible is definitely one of the most critical priorities when maintaining a hydraulic system. The kidney filtering systems from Filter Focus proofed to be at the highest degree of efficiency, cleaning the hydraulic oils to an ISO 4406 standard in short time periods.

Desiccant breathers proofed to be cost effective and performed outstanding in keep out all the unwanted floating particles. I believe that the breather elements in use will provide us with cleaner oil in future to come.

Taking all the facts above into consideration there is no doubt that Filter Focus will be able to assist us with keepings oils to an ISO 4406 standard in all the hydraulic application on Hulamin PMB in the future. I believe they will assist us in maintaining good standards on all hydraulic applications.

Regards,

Gustav Groenewald
